

Why do all these Acrobat viewers behave differently with regards to full screen page transitions, if they work at all? And why do those programmers keep on changing the keyboard shortcuts of important actions? And how do we know in what Times Roman look-alike this message will show up? Is this all done to prevent Acrobat from becoming a too popular document viewer?

Why do all those Acrobat viewers behave differently with regards to full screen page transitions, if they work at all? And why do those programmers keep on changing the keyboard shortcuts of important actions? And how do we know in what Times Roman look-alike this message will show up? Is this all done to prevent Acrobat from becoming a too popular document viewer?
