Fin des psalmes.	
Thus, I came to the conclusion that the designer of a new system must not only be the implementer and first large-scale us	ser
the designer should also write the first user manual.	
The separation of any of these four components would have hurt TEX significantly. If I had not participated fully in all th	
activities, literally hundreds of improvements would never have been made, because I would never have thought of them	ı or
perceived why they were important.	
But a system cannot be successful if it is too strongly influenced by a single person. Once the initial design is complete and fai robust, the real test begins as people with many different viewpoints undertake their own experiments.	irly
