$$
f_{2}^{\prime \prime}(x)=f_{2}^{\prime \prime}(x)=f_{2}^{\prime \prime}(x)=f_{2}^{\prime \prime}(x)
$$

As one may see the result of $\mathrm{f}_{\mathrm{\prime}}\{2\}^{\prime}{ }^{\prime}(\mathrm{x})=f_{2}{ }^{\prime \prime}(x)$ is not correct in mkiv.
The following positions of the superscripts (3) are correct both in mkii and in mkiv.

$$
f_{2}^{(3)}(x)=f_{2}^{(3)}(x)
$$
