Bibliography 2

I have amended this test document per Nick's suggestions¹. Namely, I have taken out the letter p before the page number. I have also taken out the carat for the footnote marker.

This is a test of having the same work² mentioned twice in the same document.

If there is only one citation in the paper, then it thinks it can ignore the author altogether, except in the bibliography, so I had to include another work³ which may help.

Perhaps the problem is being caused by putting in the footnote manually. But I don't want to have the author's name in the main body of the text.

If I don't put the citations in the footnote style,⁴ the author names are put in the sentences.

This is a test of having the same work,⁵ mentioned twice in the same document.

Here is an example⁶ of the way I used to have it, namely with the letter p and with the carat for the footnote marker. You'll see in the footnote that the old problem is still there (double commas) if I use the old formatting. Thanks to Nick, Jesse for their help.

Here is the command I issued. No pdf template needed.

```
pandoc DoubleCommaBugv8.txt --toc --variable mainfont="DejaVu Serif" --csl=../../csl/modern-humanit
```
